PRIORITY APPLN. INFO.: US 1988-288912 A 19881223

AB An enzyme-linked immunoassay for the detn. of cyclosporin A levels in whole blood samples is provided based on the use of β -D-galactosidase as an enzyme label and chlorophenol red- β -D-galactopyranoside (CPRG) or resorufin- β -D-galactopyranoside (ReG) as a β -D-galactosidase substrate. Lysed whole blood sample containing cyclosporin A was added to excess β -D-galactosidase-labeled anti-cyclosporin antibody to form a labeled antibody-cyclosporin A complex. The unbound antibody was removed by immobilized cyclosporin C on a solid support. Cyclosporin A was determined by the amount of β -D-galactosidase in the complex using either CPRG or ReG as the substrate. Absorbance rates (mA/min at 577 nm) were proportional to cyclosporin A concentration
